

The Petrylaw Injury Compensation Report

LOWER LEG FRACTURE INJURIES

How Minnesota Juries Decide the Value of Pain and Suffering in Lower Leg Fracture Injury Cases

The Petrylaw Lawsuits Settlements and Injury Settlement Report provides facts and estimated ranges of value for Minnesota pain and suffering for specific traumatic injuries. Often in trauma cases, many body parts are injured. As a result, the verdicts, settlements and case histories that you often hear discussed on the evening news, in the newspaper or around the office do not help you determine the value of your injury when you have injured only one body part.

Often, in cases involving lower leg injuries arising from slip/trip and fall trauma, car accident trauma or construction accidents, the victim has other injuries as well. These frequently include neck, femur (thigh) or lower leg (tibia and fibula) fractures. Thus, it is very important that keep in mind that if you have suffered a traumatic injury to more than one part of your body, you should use the information in **The Petrylaw Lawsuits Settlements and Injury Settlement Report** as only a starting point. The value of your case could be much less or much more than the amounts discussed in **The Petrylaw Lawsuits Settlements and Injury Settlement Report**.

A typical Minnesota personal injury lawsuit is based upon a claim of negligence where you contend that someone else is responsible for causing your injuries. In this type of case, as the Plaintiff (or the person suing someone else) you bear the burden of proving the following elements:

1. **Duty** – you must prove that Defendant (the party you are suing) had a duty to do something specific (examples – maintain a proper lookout when driving a car, obeying the posted speed limit, removing snow and ice within a reasonable period of time following the conclusion of a storm, or inspecting a the floor in the produce section of a grocery store);
2. **Breach** – you must prove that the Defendant failed to perform the duty (examples – a driver texting on a cell phone instead of watching where he is driving, traveling at an excessive rate of speed, or allowing snow and ice to accumulate on a sidewalk well after a storm has ended);
3. **Cause** – you must prove that the Defendant’s failure to perform the duty was the proximate cause of your injury. This means that you have to convince a jury that, for example, a driver’s failure to maintain a safe distance between his or her car and yours caused his or her car to crash

into your car and further caused you to suffer an injury. There can also be superseding causes or things that happen after someone else breaches a duty that either cause an injury or make the injury more severe than it would have been if the event that happened after the breach of duty had not occurred (example – your car gets hit broadside by a car that runs a red light. After the collision, a well-meaning person sees that you are trapped in your car and tries to remove you from your car. In the process, he grabs your head, without realizing that your neck is broken, and yanks on it causing you to become paralyzed).

4. **Damages** – you must prove that you have been damaged as a result of the Defendant's conduct. Damages may include pain and suffering, lost wages, damage to property, and other special damages. You must prove your damages with certainty and not based upon speculation or what might happen. (Example – if you seek to prove that you are going to need future medical treatment, your doctor(s) will need to state that it is his or her opinion that to a reasonable degree of medical certainty you will need specific medical treatment in the future and that the treatment will cost a certain amount).

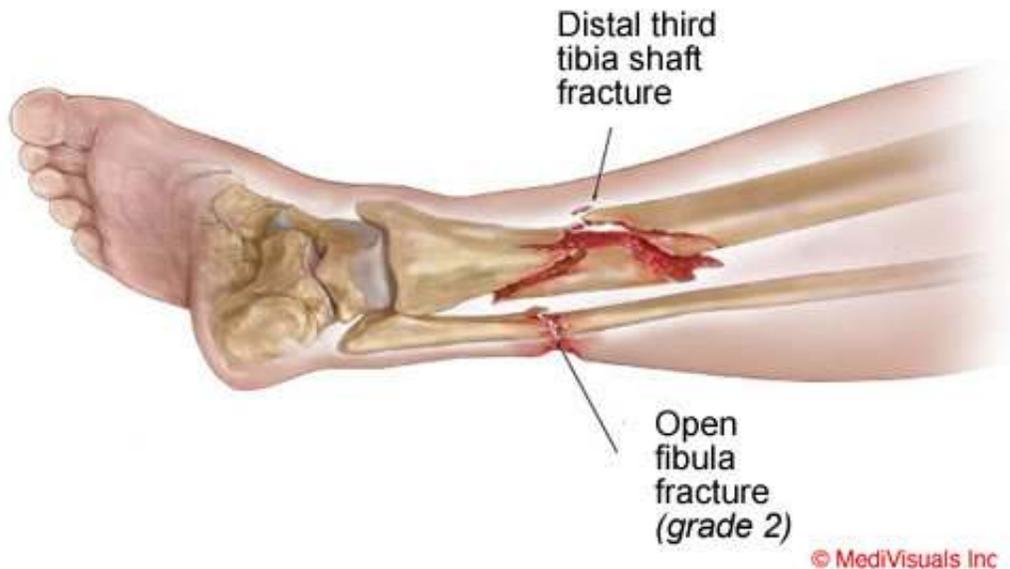

While you are trying to prove these elements at trial, the Defendant(s) may raise the following defenses in front of jurors, and be assured that defendants have raised these defenses time and time again with great success in either limiting or denying plaintiffs' injury claims:

1. Many trauma victims alleging back injuries have suffered spinal injuries in the past or have degenerative chronic conditions.
2. It's been shown scientifically that many people over 40 years of age have herniated discs, even without knowing about them.
3. Many car accidents that cause significant back injuries involve little or no damage to the car raising doubts in the minds of juries as to causation.

Rick Petry will gladly meet with you to discuss and evaluate your injury case at no cost or obligation. Please call Rick to discuss your injury case at 612.869.RICK (7425) or 612.332.0334.

Please keep in mind that the values discussed in this report are for pain and suffering only. We tried to focus this report as much as possible on cases where there are not significant injuries in addition to the neck injury. The dollar amounts can be much higher when an injured person also incurs significant lost wages, significant medical expense payments and other so-called special or out of pocket damages or there are significant injuries to other parts of the body.

Open Comminuted Distal Tibia and Fibula Fractures

Definitions

Tibia - The longer bone of the lower leg (below the knee), commonly called the shin bone.

Fibula - The long thin bone of the lower leg (below the knee). It is smaller than the tibia.

Tibial Plateau - The flattened part of the top of the tibia that articulates with the femur (the thigh bone).

Fracture - A break or disruption in the continuity of a bone.

Comminuted Fracture: A bone splintered into multiple fragments.

Open Fracture: When the wound extends through the skin

Closed Fracture: When the wound does not extend through the skin

Displaced Fracture: A fracture in which two ends of a fractured bone are separated from each other.

Fracture Dislocation - A joint dislocation that is accompanied by a fracture of one or more of the bones that form the joint.

Open Reduction and Internal Fixation - A fracture treatment in which surgery is used to reduce or set the fracture fragments and then hardware (such as a rod, plate and/or nails) is then implanted to hold the reduction in place.

Closed Reduction - Manipulation or setting of the fracture without open surgical correction.

Estimated Minnesota pain and suffering values of arm injury cases based on the circumstances described:

Low Range of Value for a Tibia and/or Fibula Lower Leg Fracture: \$0 to \$40,000

Your case is often valued in the \$0 to \$40,000 range when any or all of the following factors are present: When the fracture is questionable, meaning when opposing radiologists disagree on the presence of a fracture. When a minor or hairline fracture exists. When you do not need surgery. When you have an excellent recovery. When you will not likely have future pain or disability. And when your case would be tried in an area where juries are conservative in their awards.

Actual Case: \$ 0 – _____.

Actual Case: \$50,000 -.

Actual Case: \$ _____ -.

Mid Range of Value for a Tibia and/or Fibula Lower Leg Fracture: \$50,000 to \$200,000

Your case is often valued in the \$50,000 to \$200,000 range when any or all of the following factors are present: When both the tibia and fibula are fractured. When you require surgery. When you have a fair to good recovery. When you will

likely have some future pain or disability. And when your case would be tried in an area where juries are about average in their awards.

Actual Case: \$100,000 - _____.

Actual Case: \$300,000 - _____.

Actual Case: \$360,000 - _____.

High Range of Value for a Tibia and/or Fibula Lower Leg Fracture: \$250,000 to \$900,000

Your case is often valued in the \$250,000 to \$900,000 range when any or all of the following factors are present: When your fracture is severe. When you have multiple fractures. When you require surgery. When you have a poor to fair recovery. When you will likely have significant future pain and disability. When additional future surgery is credibly recommended. And when your case would be tried in an area where juries are liberal in their awards.

Actual Case: \$1,500,000 - _____.

Actual Case: \$4,000,000 - _____.

Actual Case: \$6,500,000 - _____.

Please feel free to either call or E-mail Rick to discuss your Injury Case!

I am a personal injury attorney – lawyer at the law firm Mansfield, Tanick & Cohen, P.A. in Minneapolis, Minnesota. If you have suffered a lower leg fracture injury, you're invited to call me to discuss your injury case. I will ask questions about your injury and treatment and help you determine the value of your claim.

Call me at 612.339.4295 or 612.387.7229 or e-mail me at rpetry@mansfieldtanick.com for a free legal consultation.

I promise you, I'll do everything I can to help you.

Rick L. Petry, Esq.
